

# CREEPING BLUEGRASS

## Two Putt

**Two Putt - Creeping Bluegrass (*Poa annua var. reptans*)** the perennial type of *Poa annua* found naturally on many of the best golf courses. Two Putt is the only variety available by seed and exclusive. It is adapted for multiple uses, but where it really shines is on golf greens. Here's what Matt Peltier, Head Superintendant of Springhill Country Club in Albany, Oregon had to say about it:

"Two Putt Creeping Bluegrass is the most obvious fit for maintaining putting surfaces where *Poa annua* is being managed. Its growth habits, putting quality, drought tolerance, and similarity in color to the native *Poa annua* make it easily adaptable to an overseeding program, as well as a perfect fit for renovation of putting greens. The feedback from golfers and the constant compliments on the density, color, and speed of greens makes Two Putt the obvious choice for our putting surfaces."

Two Putt improves the uniformity of your *Poa* greens and has shorter seed head expression. This can reduce your applications of growth regulators. Two Putt is shade tolerant and performs best with a low cut.

( Rating: 1- 9, 1: Poor; 9: Excellent )
