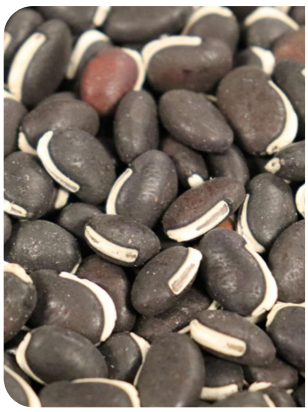
DEER CREEK® SEED BY DLF

Lablab (Treated)

Legume

SEEDS & SCIENCE



Description

Lablab is a tropical annual legume native to Africa and Asia. This crop thrives in hot, dry conditions and is very drought tolerant. It is an excellent, high protein forage commonly planted for livestock or for food plots. The plant looks like a soybean plant, but grows taller and tends to bind together to form a natural barrier. Lablab prefers warm temperatures and will not tolerate frost. THIS PRODUCT IS TREATED; DO NOT USE FOR FOOD, FEED, OR OIL PURPOSES. STORE AWAY FROM FEEDS OR OTHER FOODSTUFFS.

Key Features

- Annual legume
- Native to Africa and Asia
- Very drought-tolerant
- High-protein
- Prefers warm temperatures
- Not frost tolerant
