

# PastureLand Dry-Land Mix

SEEDS & SCIENCE

## Forage Mixes & Blends

### Description

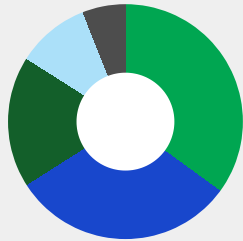

PastureLand Dry-Land forage mix is designed for farms, ranches, and range with little to no irrigation. Specially formulated to grow well on the annual precipitation available in most areas of the United States excluding very arid, desert climates. If sprinkler or flood irrigation is used, or annual rainfall amounts exceed the minimum requirement, yields will improve. Not suitable for high rainfall areas.

### Key Features

- Low-water needs
- Excellent for grazing
- Can be cut and bailed if water is sufficient
- Competes with weeds

### Components

35%	Tall Fescue
31%	Orchardgrass
18%	Festulolium 4N
10%	Annual Ryegrass
6%	Crested Wheatgrass

Micro-Boost® is enriched with nitrogen, phosphate, manganese and zinc to help seedlings thrive in harsh environments, and its calcium carbonate casing holds moisture for the seed and acts as a pH buffer in the soil. The added weight also prevents wind drift and improves seed-to-soil contact during planting.

X-Seed® Pasture Land® forage mixtures are treated with endophyte-free Micro-Boost®, creating a nutrient-friendly zone around the seed and ensuring early plant growth, uniform emergence, and longer and more developed root systems capable of withstanding extended grazing periods.

### Additional Specs

#### General Characteristics

Segment	Forage
Species	Forage Mixes & Blends
