

PastureLand Equine North Mix

Forage Mixes & Blends

SEEDS & SCIENCE

Description

Pastureland Equine North is a mixture of perennial sod-forming grasses and clovers that will thrive in the northern region. The blend of cool-season grasses provide season-long forage to maintain pasture productivity. White and Red clovers have been added for forage diversity as well as natural nitrogen production for the companion grasses in the mix. Micro-Boost seed coat will enhance seed germination and seedling vigor.

Key Features

- Formulated for Northern climates
- Perennial sod-forming grasses and legumes
- Drought tolerant
- Nitrogen-fixing
- Micro-Boost seed coat

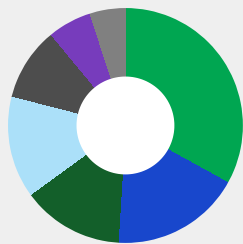

Micro-Boost® is enriched with nitrogen, phosphate, manganese and zinc to help seedlings thrive in harsh environments, and its calcium carbonate casing holds moisture for the seed and acts as a pH buffer in the soil. The added weight also prevents wind drift and improves seed-to-soil contact during planting.

X-Seed® Pasture Land® forage mixtures are treated with endophyte-free Micro-Boost®, creating a nutrient-friendly zone around the seed and ensuring early plant growth, uniform emergence, and longer and more developed root systems capable of withstanding extended grazing periods.

Components

33%	Perennial Ryegrass
18%	Timothy
14%	Hybrid Ryegrass
14%	Orchardgrass
10%	Annual Ryegrass
6%	Kentucky Bluegrass
5%	Other
