

# PastureLand Overseeder North Mix

SEEDS & SCIENCE

## Forage Mixes & Blends

### Description

PastureLand Over-Seeder North is a specially formulated mixture of cool season grasses and legumes to extend the Northern growing season and rejuvenate old worn-out pastures. Clovers are added for variety of forage as well as producing nitrogen to feed the grasses it has been paired with. This mixture will provide substantial growth in the fall and spring to maximize production on your acres. Micro-Boost seed coat will help with seedling vigor and survivability.

### Key Features

- Formulated for Northern climates
- Mix of cool-season grasses and clovers
- Extended growing season
- Nitrogen-fixing
- Micro-Boost seed coat

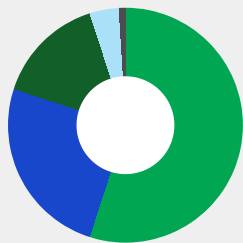

Micro-Boost® is enriched with nitrogen, phosphate, manganese and zinc to help seedlings thrive in harsh environments, and its calcium carbonate casing holds moisture for the seed and acts as a pH buffer in the soil. The added weight also prevents wind drift and improves seed-to-soil contact during planting.

X-Seed® Pasture Land® forage mixtures are treated with endophyte-free Micro-Boost®, creating a nutrient-friendly zone around the seed and ensuring early plant growth, uniform emergence, and longer and more developed root systems capable of withstanding extended grazing periods.

### Components

55%	Annual Ryegrass
25%	Hybrid Ryegrass
15%	Orchardgrass
4%	Crimson Clover
1%	White Clover
