

PastureLand Overseeder South Mix

SEEDS & SCIENCE

Forage Mixes & Blends

Description

PastureLand Over-Seeder South is an ENDOPHYTE FREE mixture of grasses and legumes to extend the growing season in the Southern to Transition Zones and rejuvenate old worn out pastures. Clovers are added for variety of forage as well as producing nitrogen to feed the grasses it has been paired with. This mixture will provide substantial growth in the winter and spring to maximize production on your acres. Micro-Boost seed coat will help with seedling vigor and survivability. Percent Composition: 36% Festulolium 4N - Lofa Micro-Boost Coated 30% Intermediate Forage Ryegrass Micro-Boost Coated 20% Tetraploid Annual Ryegrass Micro-Boost Coated 10% Medium Red Clover Micro-Boost Coated 4% White Ladino Clover Micro-Boost Coated

Key Features

- Formulated for Southern climates
- Mix of grass, legume, and clovers
- Extended growing season
- Nitrogen-fixing
- Endophyte-free
- Micro-Boost seed coat

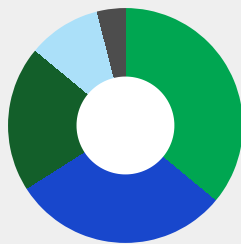

Micro-Boost® is enriched with nitrogen, phosphate, manganese and zinc to help seedlings thrive in harsh environments, and its calcium carbonate casing holds moisture for the seed and acts as a pH buffer in the soil. The added weight also prevents wind drift and improves seed-to-soil contact during planting.

X-Seed® Pasture Land® forage mixtures are treated with endophyte-free Micro-Boost®, creating a nutrient-friendly zone around the seed and ensuring early plant growth, uniform emergence, and longer and more developed root systems capable of withstanding extended grazing periods.

Components

36%	Festulolium 4N
30%	Hybrid Ryegrass
20%	Annual Ryegrass
10%	Red Clover
4%	White Clover
