DEER CREEK® SEED BY DLF

Sandy Sure Shot Mix

Food Plot Mixes & Blends

SEEDS & SCIENCE

Description

Sandy Sure Shot Food Plot Mix will allow you to get more out of your sandy ground. Sandy Sure Shot seed was designed to grow in dryland and sandy soil conditions. Sand-tolerant species are selected to attract both deer and birds for a great hunting experience. Great wildlife nutrition is supplied throughout the growing season first in the form of succulent young plants and beans and eventually as mature buckwheat and sunflowers. For best results, plant Sandy Sure Shot after the last spring frost through the early fall to attract wildlife during late fall hunting seasons.

Key Features

- Late spring/summer/fall planted annual
- Formulated to persist in light sandy and dryland soil conditions
- Attracts deer and other avian wildlife

Components
